About this program
The Program operates during Term 1 and includes social events such as an Orientation Week BBQ and activities early in the session, providing opportunities for students to meet other students (mentees and mentors). Information about peer mentoring and the benefits of actively participating in such a program can be found on the in the FAQ section

When does the program run?

Term 1.
Orientation Week to the last week of term.

Program duration?

The Program runs from O Week and ends in the last week of Term 1

New student (mentee) registrations

You can find out more in your Faculty Welcome during Orientation Week.

I'm a senior student, how can I become a mentor?

Science Peer Mentors are experienced undergraduate students who provide support to first year students making the transition to university life. Mentors use their experience and knowledge to guide new students through those first crucial weeks at university. All mentors are provided with comprehensive training to ensure they have the knowledge, skills and confidence to support new students. To be a Science Peer Mentor you need to have the capacity to provide enough time and motivation to commit to the duration of the program. Mentors are expected to meet/maintain contact with a group or individual mentees during Term 1. Applications for mentors to partake in the 2020 program are now closed.
