Considering taking an elective this Summer term? In Interior Architecture Composition 3 (INTA1003) you'll learn the techniques to render complex 3D visuals using Maxon Cinema 4D and model a small scale project using a 3D software of your choice.

Please note that basic to intermediate knowledge of a 3D modelling software is required.

The course will use Cinema 4D to construct renders with tutorials as well as lectures running through technical skills of importing/exporting, advanced materials, lighting, landscapes, and understanding render settings as well as addressing theory of composition of rendered scenes.

This course will enable you to produce a graphic package of a suite of architectural drawings & a rendered set of visuals.

Find out more about this course at the Handbook link below.
